Hi everybody,I'm planning to build DIY Klipsch LaSacalas with JBL drivers. I was browsing the internet for several days to find any recommendations, whether this combination will work or not, but nobody seems to have tested it yet.Today I found this excellent site and find it very, very useful. Did I get it right: Pi speaker's motto is 'Whether you build 'em or buy 'em - This is the place to be!?' So where can I obtain plans?Thanks for any reply.Harald

Search the Pi Speakers forum and website and get an idea which model(s) you're intersted in. There are several models to choose from, various sizes and price points for different applications. When you've decided, write to me and ask for the plans and I'll send them right out.
