Been thru the pages, got my veneer and MDF ready, waiting for the speakers but I can't seem to find the proper size port off the shelf. Something was posted about carpet cardboard tubes but they differ in size from the working drawing. A little help?

Is it a 4" port?...If so Home Depot has tons of 4" PVC for cheap, and most carpet tubing is indeed 4" diameter.

The port is 4" dia. and 4" long. The material I use is cardboard mailing tube. It is available at any drafting or office supply shop. The outside diameter is 4", inside diameter is 3.84". It's perfect.
