I'm machining the cutouts for the driver for pro pi7's. I have the circle cutout dimensions from the plans, but would also like to install the t-nuts (8) for mounting. Can someone advise me on the hole diameters, or recommended screw size. Has anyone used t-nuts for mounting, or just wood screws? Thanks

If you purchased new 2226's, they'll come with screws and T-nuts included in the box. The thread pitch is 10-32. You'll need to drill 1/4" holes on the baffle to install them.
