Due to some unexpected cash problems I need to sell my 2426H drivers and put off my Pi speaker project for a while.One of the drivers has a VERY small dent on the bug screen and a small scratch on the JBL sticker on the back otherwise they are MINT with original diaphrams. Serial numbers on these are 33822 and 33879.The guy who I purchased them from claimed they were never used and they do appear as such since there are no creases on the gaskets from mounting them on a horn but I cannot verify that.$350 plus shipping for the pair (what I paid for them) E-mail me if interested.

Have you had any luck selling your 2426's? If you don't get any "bites" here, you might consider putting them on eBay. I'd buy them myself, but I'm pretty well stocked right now.
