---

I'm new at this and would like to build a center channel for my home theatre using a JBL 2225J with 2426J mounted on a 2344 horn. Unfortunately I have no idea what enclosure dimensions/port size/length or X-over should be. Any suggestions or ideas would be appreciated. The good thing is I can build cabinets w/ little effort and know a little about electronics, but not in this discipline. I look forward to any and all replies. Sincerely, John Gray

speakers with 2205's and 2225's before the 2226's were introduced. I really like these older drivers, to tell the truth.
