I'm using the stock Eminence crossover in my theater 4 Pi's to keep costs down but was wondering which components on it you would recommend for up-grading as finances allow. Of course, I am also adding the compensation network. Thanks! Garland

The parts on the PXBII1K6 are pretty decent, really. No electrolytic caps and the coils are good size. But if I were to upgrade, I'd go to even larger 15 guage coils. That will lower DC resistance. Next you can go with your favorite audiophile caps.
