Hi there,I have not started to build 2Pi yet, because i am hesitating tostart may be with a dessign offering more bass.I can't find any comments/recommendation of Beta-15 speaker in 4Pi.Is there some reason I ignore ? After last change of Eminence parameters, it seems that Beta-15is quiet good replacement for oldest Aplha-15: require the similar boxdimensions and offer the similar bass response (Beta-15 in 7cu ft has -3dB at 44Hz, Alpha-15 -oldestt- had -3dB at 42Hz in 8 cu ft).This is nearest than new Alpha-15 which require 11.5 cu ft.Is there some sonic penalty for Beta-15 ?Thanks in advance,O'Tor.

Hi Wayne,Thanks for your response. I would also like to ask you if the midrange quality of Alpha-based one and two Pi is the same. I.e. the only change for the passing from one Pi to two Pi is the benefit of deeper bass ?I am asking this because in the hifi-line, there is often some midrange degradation for the largest cones, especially when they are used with no low-pass crossover (often a huge peaks andirregularities in the 3-5kHz region, and often not shown on thedriver SPL plot but still audible). TIA,O'Tor
