Subject: Any designs with Eminence Kappa woofers?

Hi,I was wondering if any of the designs would work with Eminence Kappa drivers (the Pro 15 by the way). I can get these for a very reasonable price and would very much like to use them. The box design isn't a problem, but the crossover is. I just want to make sure the crossover will work well with them. Thanks!--Ryan

Acutally any of the Kappa 15s would work: regular Kappa 15A, Kappa 15LFA, or the Pro. Thanks again in advance for any replies.--Ryan

I don't use Kappas but I think the crossover will work for it. I use the same basic crossover for several woofers, changing just the Zobel values. Values for the tweeter circuit are specific to the driver, but a chart is provided for use with different ones.

Thanks! This will be a huge help. While I cannot build it just yet (I will when semester is over) I will buy the woofers so that I don't have to worry about missing out when they run out. Thanks again for your great help!--Ryan
