I was told you can damage your hearing if exposure to low levels, is prolonnged.99 db is 1 hour max102 db is 30 minutes max105 db is 15 minutes max108 db is 7.5 minutes max111 db is 3.75 minutes maxthe resulting damage from over-exposure is not immediately apparent as it affects only the higher frequencies.Victims can hear low pitched sounds as well as before, but lose the highs.

Subject: huh?

Yes it's true. The damage isn't like collateral, but every concert, loud music session... It adds up.Adam
