Because of cost issues and just because it sounds like a good idea I would like to try a 800hz crossover from a alpha15 and use the natural roll off of a ksn1188. Could I use one of the woofer only sections of the standard designs or do I need to start from scratch. The efficiency seems right and I know Andy has the response curves for the 1188, this may have already been discussed but I would like to hear the newest thoughts on this idea. Also I assume I need to go with a 5x15 horn to get down to 800hz, which ones will work (cost?) Thank's again, MikeH.

Sounds like a good plan. Just remember, you'll need a big box or an open baffle to use the Alpha 15.
