Subject: assembly question...

Probably just a few more nights and the Theater 4 Pi cabinets will be together. I've got one more driver hole and then the ports to cut. My question, however, is whether it is necessary to screw all the panels together. Is a solid glue job enough, or must I screw/nail everything. I've decided to put a round-over on the edges, and I'm sure that screws would cut it pretty close. Any insight from those more exprienced is appreciated.KevinPS, Till, I'll be running Paramours as well. I got them (assembled) off of someone for $200 less than the kit. They're just waiting for the Pis.

Subject: Nice score on the Paramours

Nothing wrong with screwing the cabinets together and then removing the screws after the glue dries. But in that case I would put in more screws during assembly, say, every 6 inches instead of every 12.
