I've heard plans are available but I can't seem to find them on the pi site. Anyone know where to find? Thanks.

Decide which model you'd like to build and let me know. I'll E-Mail you the plans immediately.

Subject: Theater 3pi ... difference with Thermionic 3pi?

To keep the size down, I think I'll try the Theater 3pi. I didn't want to drop down to the 1pi or 2pi given that these use the Motorola piezoelectric tweeter ... this is based on the assumption that the Eminence titanium tweeter is a higher quality driver. Also, what are the sound differences between the Thermionic and Theater systems? I notice that they use the Alpha and Delta Eminence woofers respectively. Thanks!

>> To keep the size down, I think I'll try the Theater 3pi. Excellent choice.>> I didn't want to drop down to the 1pi or 2pi given that these use>> the Motorola piezoelectric tweeter. Actually, the tweeter is excellent but the overall speaker design doesn't provide as much dynamic range or as deep bass as the larger speakers do.>> Also, what are the sound differences between the Thermionic and>> Theater systems? They sound pretty similar, but the Thermionics can be used impedance-sensitive tube amps.
