Could I please get a set of Theater 4 plans? Would very much like to build a set of these. Thanks
John

Would the Thermionic Studio Series 4 be a better choice with an SET 8 watt 300b amp? Thanks
again, John

bit deeper. The Thermionics have a different damping value so they sound fuller, and the

midrange takes on a slightly different character too, having a sound that I would describe as vintage tube sound. But they are very large.

Subject: Thanks Wayne

You mentioned that the Thermionic Four Pi has a tiny bit more extension at the top end?Whats different about em? They both use the 2002 right? Is there a little more top octave compensation?I just ordered some plywood blades for the skilsaw, some 36" clamps, and a cutting guide/straight edge thingy. I'm set :-).I'll take lots of pictures of course.

That's right, exactly. The Thermionic uses the same PSD2002 tweeter but has a little more top-octave compensation.
