Hi Wayne,I have looked at all the speakers/kits many times and have a question. Is it possible to run a smaller (ie 2pi) box (or slightly bigger) with a compression HF driver and flare? I ask because for my applications, a 3 or 4 cabinet is just too big and I would like to check out the 2002 compression driver. I know that you have said the Motorola piezo is good and I am not dismissing out of hand for price or anything, but would like to try a smaller LF (8 inch) driver and horn in a smaller box. Thanks for any information.Rich

Certainly! It's just that smaller high-efficiency cone drivers are really midrange units in themselves, and that's why I combine them with high-frequency tweeters in smaller two-way designs.
