I'm in the proccess of creating a program that will generate crossover circuits for testing in Spice. You just select the drivers, crossover style, frequency, lpad, ... and out pops an aimspice file with everything set up, all you have to do is open, click AC and click run.It is coming along really well. I should be done in under 2 weeks.Here is some sample outputThis will prove to be a very useful tool for anybody.I'll post the program soon.Danny

That would be most excellent. The crossover software ive fooled around with is nice because it lets you engineer a system rather than gues about it. however, none of the commercially available programs that I've found allow for use of compression drivers with a horn lens.hope you can get it all working, it's much needed.Bill
