Hello Anyone heard of this old brand? I have a pair of 10" whizzers form them. They look to have alittle quality to them. Just tried them free air and they seem efficent but light on bass. Mayby good for 2 pi's? One thing that may be bad is I can see through the mesh dust cap and the it looks like the voice coils on aluminum. Thanks in advance

Sorry, but I don't know anything about those speakers. Let us know how they sound!
