Wayne, thanks for sending me the thermionic 3 pi plans. I feel silly for asking this but shall I assume that the top input terminal on the xover schematic is positive? Does the polarity of any of the drivers get inverted? If a fella were to spend a little extra money upgrading some of the xover with premium parts, which component positions would the extra money be best spent? (would a paper in oil cap be worthwhile at C1?) Yeah, I know a lot of this is personal preference but if anyone has experimented and has some input that would be great. Eat Mo' Hot Sauce crazychile

The parts on the basic crossover are actually pretty good.
