
Subject: Is there any difference between Eminence Alpha 12 and Alpha 12A?

I found a guy who could import a pair of Eminence drivers for my planned Thermionic Three Pi but on the source's homepage (<http://www.newsensor.com>) the 12 inch Alpha driver is called "Alpha 12A". I did a google search and found that partsexpress also have the A in the end of the name but I also found that their specifications didn't differ at all from the ones at the Eminence site. Are these two different versions? Or can I use the Alpha 12A for my Three Pi?/Erik

Subject: The Alpha 12 is actually the 12A

The part you want is the Eminence Alpha 12A. Many of their speakers are also offered having a "B" version or an "LF" version. Some people, myself included, tend to omit the "A" suffix when discussing these parts.

Subject: Heck, Eminence themselves omitted the "A" :) (nt)
