Hi Guys, just 'discovered' PI Speakers, I cant believe what I've been missing! Does any one have experience of the JBL K130 in 4PI or 10PI designs, also do the designs need adjustment for these drive units, I'm too much of a dope to use the PI Align software! and finally could I please have the Cabinet plans for both these designs.Thanks in advance SolderJunky goodstuff57@hotmail.com

I've used a bunch of JBL 2205's over the years, and the K130 is somewhat similar. The 2205 is tuned a little lower and the K130 is a little more efficient. The 2205 worked very well in either a

should be tuned appropriately for the driver used. It's pretty close, so as far as size is concerned, the cabinets are interchangable. But the K130 motor cabinet should be tuned a little higher. PiAlign recommends a 2.625 cubic foot box tuned to 60Hz, using a 5.25" x 9.35" rectangular port

cornerhorn, make it 33" x 17" x 9". I can send plans if you'd like, but be sure and clear out some space. Hotmail usually rejects large attachments.
