I thought you guys might be interested in this. I just finished up this guy's box with a formica finish. Same stuff that is used on countertops. Less forgiving to apply than, say, carpet, but more forgiving than paint. Glossy finish, comes in many different colours and patterns, very durable stuff... Perfect for just about any speaker box, especially cars. I think I'm going to do my quasi pi tens and fours in this stuff. Very stylish. This is only my third box using formica. I had some problems, but it turned out well. The bit of scuffing is some areas where I haven't cleaned the box off yet. Adam

Your speaker cabinet looks great! And I agree with you that it is an interesting look, but it's kind of my car, and they get hot, Hot, HOT! I'll bet the surface is 150o on a summer afternoon. But, wow, yours look great!

I suggest trying cutting some boxes out of Corian, then your base material and covering is one and the same, and looks even better.

Really? It only cost me about \$30 american to cover that box... That includes half a sheet of material, contact cement and a couple of rollers. But yes, the stuff burns like hell. It was out in the sun most of today and it would burn you if you touched it. I threw the subs in the box and did the

finishing touches. Looks sooooo clean and nice. I'll post a final pic in a few minutes!Adam

Subject: Here we go - subs installed...
