Subject: Which Pi should I choose?

Hello, Wayne,I'm going to build my system. The NAD C740 is on its way. Here is some of my information: LR is 14X17X6.5(H); the C740 (I know it won't be a tube amp) only has a 35W output. My question would be that which one of your Pi speakers would get loud with my C740 and is appropriate to my LR? It sounds the Studio two Pi is a good choice. What about the Theater four Pi, is it too big? Will all your speaker be magnetic shielded, or how can I do that? My major concern is the cabinet. Living in apartment, it will be hard for me to make it by myself. Also, the budget is always kept in my mind. Thanks.BTW, after reading recent post on the forum, it is really great so many people are happy with Pi. Actually, I have been searching web for a kit for several weeks. Your Pi website gave me the most information. Thanks. Wayne.Yalei

and is an excellent speaker, particularly for the price.

I haven't heard the 2Pi's but I'm sure.....My Theater Four Pi's would play stupid loud in there with 35 watts.Is your Living room ceiling really only 6.5 feet? That makes a lot less cu ft'ge to fill with sound and the 95dB 2's should get really loud.And the NAD has a just slightly forward mid-range (a hallmark) that means you won't crank it up as much as another 35 watt amp.Besides, us apartment dwellers learn to appreciate quality over quantity.None of the Pi's are shielded but I have JBL 2226's and ???? comp drivers about 24" away from my TV with no effect on the picture. Any closer and it's Fantasia. Remember how you used to get really stoned and take a magnet.....never mind!
