The only thickness I can find here is 18mm and 22 mm, would the 18 mm be suitable as it is also cheaper. I would therefore appreciate it if someone could measure the board in metric and give me an accurate figure. Nevertheless, thanks for the calculations.

WINISD which I no longer have for some reason computes box volume in both english and metric. There's also a conversion site for english-metric-english probably BMar has; both are in the archives.
