Subject: Anyone have a spec sheet for MD2001

Hi guys I've been offered the choice of a pair of Eminence MD2001s or a pair of PSD2002s but the specs for the 2001 have been taken off the Eminence website now, does anyone have a copy? Also any comments from people who have compared both would be much appreciated. I want to X-over at about 1.2K, poss slightly lower (might make the 2002 a bad option) and I don't want to add another driver above this one (might make the 2001 a bad option - from memory it was only rated to 15K?????). Which one:A. sounds nicer?B. could be more easily EQed/have it's X-over tweaked, to cover the range I want it to?Cheers,OllyP.S. I'm using a Behringer CX3400 as X-over which has 24dB/octave filters. Is the suggested working range for the 2002 using 12dB/octave and if it is would this mean I could go a bit lower with 24dB filters?

You've got mail!I've sent LMS measurements of the Eminence MD2001 and the 2039 Type I and Type II drivers.
