Hi all,i was searching for a 2-3 way horn design to be used for home HiFi, and i've found it. The 7PI horns are so cool! As simple as a horn can be. I'm really impressed. My thanks go to the company. Your site is very inspiring!S.Greetings from the Czech Republic!

I'd be happy to send you the plans, so let me know which series you're interested in.

Unfortunatelly i'm leaving home to study in Denmark for a half year, so I won't be able to build them before february 2003:(I'm curious, how the bassreflex/horn loading go together. I think I won't need the plans, as there's enough info on your pages. But any informaton is welcome! I'll be using some local drivers, which should work according to simulations. I don't want to go cheap, but i don't want to financially ruin myself either. Maybe i'll try Selenium drivers, they have a good reputation amongst local DIYers.I hope to get that PA kind of sound i hear on live rock concerts. So I think a PA horn system should give it to me. I'm planning to biamp, with some low powered tube amps, then the sound might be even better.S.
