It's my day off and a friend offered the use of his shop while he's on vacation. So I go over there and butcher up sme MDF for my custom 2 Pi, time aligned speaks. Boy, can you turn out the work ina properly equipped shop! 2 1/2 hours and there ready to venner.But I come home, log on and here's the news that you've designed a#$@&%#*& Tower?I hope my sloped baffle sounds decent, I did a seatofthepants calculation on volume and it wound up 25" high.The website has the dimension wrong; 46X15X? And I assume the port is different?

The dimensions, as Wayne stated somewhere in the forum earlier today or yesterday are: 46x16x13 built from 5/8" stock. The port is a 4.5 inch hole through the 5/8" stock on the back of the speaker.It can be found a little further down under the "2 Pi and 1 Pi closeness to wall placement question" topic./Erik

Oops - You're right. The dimensions are shown correctly on the plans but the description on the website is wrong. I'll correct that ASAP.
