I am up to building the surrounds for my HT/Stereo system and was wondering what you guys use and if any of you have built any??? I am using L20t/4406's now and want to give the dipoles a shot. I was think of 4408's with an extra 035TI out of phase. I want them to be able to go full range and still be manageably small. They will be wall/ceiling sofit mounted.

Subject: Try this

Several of these guys have dipole and bipole experience, in enclosures and open baffle.Sounds like a fun project.John
