Wayne,What is the net volume and fb for the 4pi stage series? I'm trying to model the response. I keep thinking that this driver has got to peak a bit in a box of this size.Thanks!Dan

2226 as well as other similar 15" drivers from various companies also perform well in the same cabinet, so it is apparent to me that these companies have all tried to provide compatible products so each could be sold as a replacement for the other. I see it as the "small block Chevy" of the prosound world.
