Wayne, Please send me the plans for the Studio 2's. Garland brought a pair to the last New England Valve Meet, and I'm very, very curious . . . I'm curious about the pair of Theatre 4's JLaPaire brought, too, but I'm a little short on room! Also - any thoughts on building them in birch ply rather than MDF? Would it call for a change in thickness, or is 5/8th" still the way to go? Thanks!

Keep your ears and your mind open.

Sept New England Valve Meeting

Check your mail - the plans are there. Also, Baltic Birch is excellent for these speakers, and as long as you'll keep the overall length of the port - entrance to exit - of the same dimensions, you'll be just fine.

Wayne, Thanks for the plans! Could you send me the Studio 2 Tower version plans as well? The drivers and crossover (or near lack thereof) are the same either way, right? (So I can order the kits before I finish coin-tossing . . .) I've located a local source of cabinet grade plywood and will be shopping and sawing in the next several days.

Keep your ears and your mind open.
