Are those for a bookshelf speaker? A mini-monitor? Or were you planning to install those in your car?They're monstrous!Keep us posted on your seismic activities! And you might want to invest

in some hydraulic piers to support the foundation of your house!!!

If your into the high excursion, low fs, low sensitivity drivers, www.stryke.com also has TC sounds woofers but they cost a lot less, look at the HE15Looks like a cool driver though. How much air does it displace? My Blueprint 1803 does 6L linear... :-)

It'll do 8 litres linear displacement. Just so ya know, I can't say how much I paid, but I paid a LOT less then the \$1800 retail :PThey actually ring in at a bit under 94 db/1w/1m because of the 1,100 ounce motor.Adam
