Hi Wayne and friends,I don't know if I'm in the right place, though I've been lurking in this forum for a while.I have a pair of 2a3 set amps, about 3 watts/ch. I have a pair of 40" front horns coming in for use with Lowther DX3's.In this setup, the midrange is awesome but bass is not the best. I'm looking to build a pair of bass units either for use with the same amp or with a second set of SE amps. I noticed that one PI unit has very high sensitivity. Is any sensitive in the lowest 200 Hz. range?Any and all comments are welcome.

Professional Series subs are the best for lowest bass, but they're hard to drive for some SET amps.
