Subject: 2Pi -3dB points revisited...

Hi Wayne! In a previous answer you told me that the -3dB points of the 2Pi Standard & 2Pi Tower are 60Hz & 35Hz, respectively. You also said that the correct tuning frequency for a great variety of box volumes when using the Alpha 10's was 40Hz. Would it be safe to assume that the cut-off point in a box of ~2.4 cu.ft. would be around 50Hz? Thx in advance.

Yes, 2.5-3ft3 will get you to 50Hz.
