Want to use pi 4 speakers in high power club/dance situation. Find that many 1" drivers have a limit and tend to distort at high spl's.Wondering if the Eminence psd3003's would give higher spl's, and any idea how many dbs. Notice that Yorkville's higher end cabs use the2" drivers. Is the difference in price worth it? Want to use with either the omega 15's or kilomax 15's for a smaller hanging cabinet.Use 18's on the bottom. Would the 15's keep up with the 2" horns?

The PSD3003 has been discontinued; Look for another model in a few months. I have two PSD3003's and some replacement diaphragms left, but after they're gone, there will be no more available. Eminence will continue to stock replacement diaphragms for the PSD3003 but will no longer sell 2" compression drivers.As you might expect, 1" compression horns go higher but 2" compression drivers go lower.
