The latest and greatest "Project" speaker from JBL, ...K2. With the 811b horns I stole from Speakerman and another pair of 2226j's, I think I might get this nuts. What the heck, you build'm one board at a time. Hey Wayne, it's just a pair of Pro4's stacked with a horn in the middle, right? No Hay Problema. 250 lbs each. I might need a little help getting'em into the Bumstead, or whatever that hotel in Lima is called.

TILLE, I am not sure about the 101db sensitivity on this one, check out the foam surrounds. read the posts concerning dual 15" formats and cancellation on the JBL 4648's at around 817hz, I believe SamPayne Jr went over this subject previously. Ron

A pair of 2235H's would get you closer to the design than the 2226J's, at least if you want to get all the way down that is. I think these babies are around \$12,000.00 a piece (not pair). Kelly
