Hi, I am new to this. Can anyone give me some tips before I venture into building this project, in particular, should I start with the 2 pi towers or should I just go with 3 pi or 4 pi? Is the sound that much different?Wayne, could you send me the building instructions for 2 pi towers?Thanks,I am just a newbie (for now)

I've sent the plans to your E-Mail address but sometimes they exceed Hotmail size limits. If I receive an error message and you don't get the plans, then you will need to give me an alternate E-Mail address.

I cannot recomend on over the other, I will leave that to others here which are familiar with both models.I will say this... the box sizes will vary, if the box size is critical for you then you may want to consider this. Also, the 2Pi is a great bargan, I cannot imagine a speaker sounding better for $300.00 (for the materials + some time and sweat).
