I have drivers on the way and want to start on the cabinets. I can't seem to reduce the size of the plans small enough to print. Can anyone help?Thanks,Dennis

Go fetch Adobe Photoshop trial version. Or if you have XP, Wordpad will resize by dragging the arrows at the edge of the page. If all else fails, I think I remember Bmar having a downsized version he sent to someone in your predicament a few weeks ago. In any case, the answer to this, like almost everything else, is in the archives.Stick around, build some speakers, pretty soon you'll be telling the next guy to look in the archives.Welcome to Pi World.

Hi Dennis!Bill pointed you in a good direction; You might also consider the trial version of Paint Shop Pro for resizing, viewing and printing the plans. Your kits include a copy of the plans, but to get started now, you might try the links provided in this earlier post.Take care!
