the pillow responded especially well to being cryogenically frozen and don't forget those speaker cables made of pure crapodymium costing \$10,000 a meter. I'm certain even Babblesstabbinback would approve:

Your speaker looks like a really cool creation! How does it sound? I'm starting to put together the Lima thing, and it's going to be a lot of fun. A crash course in reactive circuits and elementary filter theory. There's really some neat stuff that happens, and this is like a little seminar where we play with speaker circuits and see why they act like they do. I think it should be fun.

Subject: garlic better than wood stakes,
