I've sent the plans to your E-Mail address, but since you have a Hotmail account, they'll probably exceed your space limit. If that happens, I'd be happy to resend if you'll tell me a different place to send.As for the contents of the kit, each contains enough parts to build one speaker, so for a stereo pair you'll need two. Kits include the speaker drivers, the connector panel, hook up wires,

compression tweeter and crossover network, kits also include the crossover, tweeter compensation cable assembly, Zobel woofer damper, and all cable assemblies are completed and ready to install. Every kit containing a compression driver also includes the horn flare and the bolts to mount the driver to the horn.

Sorry about that. Another email adress is at the bottom. I actually have a couple more questions.I'm going with the Theaters cause I need something that can handle a 250w amp. Somehow I'm under an impression that some HT speakers are voiced differently for movies, but I'll only use these for music. Will these be just as fine with music as are your other

speakers?Second, the three pi and four pi have different sized woofers. The speaker guide on eminence's website says the Delta 12LF is good for being a subwoofer while it implies the delta 15 isn't as suited. Can I expect the same or more bass output from the four pi as the three pi?If you could send me the FOUR theater pi plans instead of the threes, that'd be great. The email is lrapter@adelphia.netThanks so much for your time.

>> I'm going with the Theaters cause I need something that can handle>> a 250w amp.That's perfect.>> Somehow I'm under an impression that some HT speakers are voiced>> differently for movies, but I'll only use these for music. Will>> these be just as fine with music as are your other

because they are perfect for home theater use, which almost always does "double duty" as high fidelity music speakers and as the sound system for movies.>> Second, the three pi and four pi

woofers, regardless of the series.>> The speaker guide on eminence's website says the Delta 12LF is>> good for being a subwoofer while it implies the delta 15 isn't>> as suited.That's true too. The Delta 12LF is better suited for small enclosures too. You'll notice that the Theater Series

needs the larger motor chamber volume in order to generate deep bass response.>> Can I expect the same or more bass output from the four pi as the>> three pi?Both sound very similar, actually,

better suited for systems using amplifiers having less power, such as the Class A tube amps that are becoming so popular.>> If you could send me the FOUR theater pi plans instead of the>> threes, that'd be great.Check your mail. I've sent the plans to your E-Mail address.
