Wayne, long time no post... I'm still enjoying my Thermionic 3pi - now almost a year old. In looking at the frequency response, efficency and cabinet size, it seems that the 2pi tower offers about everything that you get with the 3pi Thermionic in a smaller package. They both have the same LF response and the HF is better on the 2pi.Frankly, I wouldn't mind a smaller package so I'm wondering how you would compare them sonically? I'm guessing the 3pi has a bit more bass impact, and maybe better dynamics due to the horn. Thoughts?

a great speaker. If I didn't think they were the best products I could design for the money, I'd

speakers is in dynamic range. You're right that the tower two's have great bass response and that

be happy with either one. For the money, the tower two's are definitely great speakers. They are also attractive because of their size, and they fit well into many living rooms and home theater settings. Nice, deep room-filling bass, sweet, full mids and crystal clear highs. But the
