I'm wondering if for the sake of aesthetics I could change this to a cylindrical one of the same volume without altering any sonic properties. If so, would the cutout be centerd over the rectangle where the original port would have been?Its no big deal if not possible, but thought I'd check to see if there was any particular reason why the port was rectangle.

It won't fit. The Stage Series,

rectangular port is required just to get the layout to work. And honestly, I think it looks cool that way.
