Sorry, but I don't have any experience with this tweeter. Be sure to check the sensitivity, frequency range and crossover requirements.

I tried a pair per channel Xover 1500 with 2226Hs. I liked the sound alot but sweet spot was very small. Move your head a foot and get different results. Others have reported 4 per channel is the way to go.

These tweeters are not that great if you compare them to a good soft dome tweeter. I have eight of these (HiVi brand), same as Dayton and if you use all eight in a line source, then the sonics are very interesting and revealing, but a single unit is not that spectacular. You get what you pay for, a \$24 tweeter, for that price it's not bad really. Make a line array - lol

I was wondering if any of you guys know if the Dayton Pt2 would work for in car use? I like the sound but the dispersion seems to bring up issues.
