I'm thinking of building the Pi 2 Towers & I can get my hands on the Motorola KSN1133A's or the KSN1130A's piezo tweeters...the mounting dimensions are different than the KSN1038's, but the specs are very similar...has anyone had any experience with these 2 models...I was told the they have better dispersion then the KSN1038's....any thoughts ? ports.

Subject: KSN-1038 and KSN-1016

I like the KSN-1016, and it is similar in appearance to the 1133. But I have to admit that some of the piezo tweeters I've tried really didn't sound good, so you'll just have to try it and see. The KSN-1038/1041/1056 is the one device that I've had consistently good luck with.
