Hello Wayne, the 2Pi Towers are sounding great, I don't think my son could be happier with them (well maybe if he had a tube amp). One question for you on the Towers. I read a post from you that stated that you could drive them "all day long" with 100wpc. I happend to tell that to my son and he remembered it (ha, am I ever paying for that mistake). Well, the question is; if you turn up the treble and bass controls to the max and turn the "loudness" switch on, are you not sending a abnormal amount of LF to the bass driver that could damage it at high amp output levels? I hear the room shake and hear the thumping and besides being concerned for his ears wonder if the drivers will hold up. I tell you that sometimes they look like they just might jump right out of the box! What do you think Wayne? I guess the cones will probably hold up better than his ears but it has been on my mind to ask you so here I am. Oh... I did want to ask you for plans and I almost forgot. You already sent me the plans for the Theater 4's but now I am considering building the Theater 7 Corner Horn. I just can't resist all that sensitivity. Lots of DB's with one mere watt. I just might go with the Zen amp if I do build them. Could you please send me the plans for that speaker so I can see what I am in for? Thanks Wayne.I hope you still have my e-mail.

I'm glad you're happy with the speakers. They'll handle every bit of 100 watts, so don't be afraid

mail!
