Subject: Pi suggestions?

I am a SET newbie and I am focusing next on speakers. My amp actually delivers about 25 watts. This would be fine with my current speakers exept for a total lack of damping factor.The speakers I currently have, KEF Q90s', have a great number of resistors put in between the speaker cables and the binding posts. I am up to twelve 8 ohm 20 watt resistors and have ordered more. These resistors restrict the speaker cone excursions, each one I add brings me closer to an appropriate sound. I say this because damping is important for this particular amp. Unfortunatly, space is an issue. Were it not, I would have invested in horn speakers, or perhaps infinite baffle speakers long ago. I think I am limited to bass reflex cabinets.Any suggestions for a good, well damped driver/cabinet combo from among the Pi options?Thanks in advance.Jason
