Wayne, in a previous post you mentioned that the delta 10 would be suited to horn loading, I am interested in why the delta 12 should not be used?Have you got any reccomendations on 8" drivers that can be horn loaded in a midrange tractrix horn?Thanks!Adrian

I'm sure you can make some models and find a horn that would work well with the Delta 12. But I would not use it in a midrange horn because there are other choices that are better suited, in my opinion. The Delta 10 works very nicely, for example. For an 8" driver, try the Alpha 8.

Hey Wayne,I will try out and see how the response is using the Alpha 8. I hope its good, its a lot cheaper than many 12" drivers that I've considered :) Hopefully it matches my 2370's with PSD2002's nicely.Thanks again,Adrian
