Hey everyone.Am using Hornresp now, and it needs something called Mmd. Is this the same as Mms? If not, how can I calculate Mmd from the other t/s specs?Thanks!Adrian

Hi, in almost every window in the driver parameters section pressing pops up a window, where you put T/S parameters in and the program computes the value. Or it is in the menu under Tools-Convert parameter.K.

MMD is the moving mass of the diaphragm. There is a conversion tool that is made available when you double-click on this parameter in edit mode. Just click twice and Hornresp will ask you some questions and then calculate MMD for you using the information provided.
