CSS has put together the first Sonotube subwoofer kitthat I know of.
Sonotube kit

I meant that it was being shown at that Northwest Meet.Creative Sound Solutions is the only place I know of thathas Jordan Speakers and some Tangband models not carried byPE. On the homefront (CSS is in Canada, I am in Wisconsin USA)a test switch of drivers in the PVC boomtoobz has, I thinkmade a substantial change for the better. I swapped in oneof my FE127e's and am now comparing the sound of the RS 1197(which has none of the modifications that have been mentionedas tweaks) and this Fostex 127. *pic*s available of the boomtoobz when digital camerasget to be about eighty bucks or so.

Yeah, that's pretty cool. It's along the same lines as what Martin King is doing, which are transmission lines. But Martin said he's feeling a little put off by some of the stuff on internet discussion forums there days, and it's a pity. I completely understand, but hope to see him around again soon on the Single Driver Forum.

I'm sure that if there were questions I had for MK he wouldanswer them here as he has before. What I'm doing is experimentingwithout much basis in theory. And luck. The first FE127project was with the advice of the gang at full range driverforum. I had 2 mini enclosures from a nakamichi R-1mini receiver system. I took out the small woofer, pluggedup the port hole plus took out the backs of the Naks andthe FE127s fit like a glove. Other mod is making new baffles for a small pair of Speakerlab kits whose cabinetry is superb, but drivers... eh.These were not well-known components. But I have sinceread that Terry Cain did the building for some Speakerlab product.So the cabs get fresh baffles and maybe, someday, Jordan JX92s'es.The cabs are very close to the specs for Dr. Griffin's Jordandesign. I still have to get the tools to do some scratch building.
