The JBL 2425 is very similar to the current product offering of the 2426. I use 2425's and like them better than other drivers in that price range. I don't hear any difference in the 2426 either.The 22xt I find to be harsh and fatiguing to listen to. It does not have as good an extension in the upper freqs as the JBL.No experience with the EV.

Subject: Like Bmar said "JBL" is your best shot

Pilkar, You already have a JBL bottom end 15", the 2425 will mesh just right together. Other than if you mentioned a Altec driver for same money, and even then is only personal preference between the two of them, if you were wanting to break the wallet, I have heard that TAD is the best out there. Of course I am partial to the JBL/ALtec combo as that is what I have. I have run my drivers on:Altec 811B's/511B's, Edgarhorn and Martinelli, last 2 are solid wood horns which I like very much. Just take this as my opinion, I hope it helps you out :-) Ron
