Hi!The little 1 Pi speakers lack bass somewhat so I'm interested in your JBL based products, especially after finding some JBL drivers really cheap (2123 and 2226 among others). I was wondering if you could send me the plans for the Audiophile Series 7 Pi speakers and the Professional Series 4/7 Pi? Then I can decide which approach I should aim for (2-way vs 3-way and bass reflex vs cornerhorn). Also, how do the Pro 7 Pi differ from the Audiophile 7 Pi soundwise?I would be most greatful for your help.Best regards/Erik

speaker. They're really intended to be used with subs. They sound good alone in very small

especially the models you've asked for. Absolutely excellent speakers.

Thanks a lot Wayne!I just have to ask you one thing. Is there a crossover document (or a picture of the schematics) for the Audiophile Series 7 Pi?Best regards/Erik Johansson

Crossovers are available by themselves. You can order them online.
