Thanks Gentlemen for your kind responses.I appreciate your help.If you know any free software which I can download which will easily do 2 woofers in a reflex box.This would be helpful, and I am not sure how much choice I will have on this matter.Sincerely,-3db

PiAlign has a setting for "Qty," and entering "2" here will calculate dimensions for a dual woofer box. BoxPlot and LSPCad will also do multiple-driver calculations, so you can determine response with them.Wayne

you can cook up cool graphs, various port options and box dimensions in BoxPlot. You can get boxplot from Pi Speakers website also.Note: the multiple driver option is in the box parameters dialog box.Thomas F.
