Hi Wayne and other modellers, B2 Spice A/D v4 Standard is on sale for the rest of this month for \$125. Is this a good program? Is it fairly easy to use? Does anyone have any endorsements of it or any proposals for alternatives?thanks, Kevin Grier

Subject: Spice flavors

Hi Kevin!Good to hear from you! I think it's about time we made another run at getting together.I'm not sure about the version of Spice you mentioned. At \$125, you're not going to get hurt so it's probably worth trying. On the other hand, you can see what you're getting with AIM Spice and PSpice before you buy them, and they are very popular. Most tube models are for PSpice, and are version-specific.Wayne
